

CarePartner 6900AT Communicator

The standard in communicators – now even better

The CarePartner Communicator continues to be the industry benchmark for quality, performance, and design.

Automatic Testing makes the 6900AT an even better choice. Every week, the Communicator automatically and silently calls Lifeline to verify both the connectivity of the Personal Help Button with the Communicator and the Communicator's ability to send a call into the Response Center. Automatic testing improves system reliability and user experience in several significant respects:

- **Frequency:** Testing occurs four times as often as that of subscribers who test manually once a month.
- **Reliability:** The 6900AT is not reliant on manual testing.
- **User Experience:** No longer will check-in prompts startle subscribers. Of course, subscribers are free to push their button at any time to test the system for their own comfort and reassurance.

The 6900AT works with the AutoAlert PHB, which provides an added layer of protection by calling for help when it detects a fall.* The 6900AT can also be paired with the Voice Extension 68XT. These popular and proven innovations will allow you to better meet the needs of subscribers and can help your program achieve stronger business results.

Benefits of the CarePartner 6900AT Communicator

- Automatic Testing improves system reliability and user experience
- Supports differentiating innovations proven in the marketplace:
 - AutoAlert
 - Voice Extension

PHILIPS

Features and Benefits for Lifeline Subscribers

New! Compatible with the AutoAlert Personal Help Button and the Voice Extension (68XT)

The 6900AT is compatible with the new AutoAlert button, which automatically places a call for help if a fall is detected, even when a subscriber cannot. Also, the 6900AT is compatible with the Voice Extension accessory, allowing an additional speakerphone so that your subscribers can hear and be heard in more remote parts of their home.

New! Automatic Testing

The 6900AT silently tests itself and its buttons. This automates the testing process and provides a better user experience. The testing will happen every week—four times as often as that of subscribers who test monthly! Philips Lifeline alerts you when we don't get an automatic signal and have been unable to resolve the situation.

Connection confirmation message during Help Call

A message confirms that the Help Call has connected with the Philips Lifeline Response Center, reassuring the subscriber.

Remote Call Answering

Subscribers can use the speakerphone to answer incoming telephone calls just by pushing their Personal Help Button.

High-volume speaker for those with hearing limitations

Adjustable controls can be set to high volumes.

Neutral coloring, integrated antenna, and compact, rounded case

The unit's superior design provides a more pleasant fit in the house.

Multiple-subscriber support

The CarePartner Communicator works with up to eight PHBs.

Safety Features

Continuous telephone line and power testing

The telephone line and AC power are continuously monitored.

Low-battery warning

The unit will automatically alert the Philips Lifeline Response Center if the PHB battery or the unit's battery backup is low.

Status indicator

The unit indicates power and phone line status and flashes if a secondary extension phone is off the hook.

30-hour power failure protection

A rechargeable battery backup of up to 30 hours offers added protection during a power failure.

Auxiliary modular jack

Telephones and devices such as answering machines can be connected to the auxiliary modular jack built into the back of the Communicator. The 6900AT automatically disconnects this auxiliary jack during Help Calls.

Features and Benefits for Programs

New! Automatic Testing

This can give you earlier visibility of subscribers who are leaving the service without contacting your program—potentially providing an earlier opportunity to retrieve equipment from their home.

Minimal pre-installation prep

The rechargeable battery does not need to be charged before installation and provides four hours of backup power after only one hour of charging. Thirty hours of backup power will be provided after a full charge.

Easy troubleshooting assistance

A flashing green light indicates trouble. By pressing the Reset button, the unit announces the problem type: phone off hook, no power, or low battery.

Activation Voice Prompts

Activation Voice Prompts are user-friendly, prerecorded voice prompts that provide step-by-step installation guidance. You can turn them on to assist a caregiver who would be installing the service, use them as a teaching tool for new installers, or switch them off for experienced installers.

Self-Test mode / AutoLearn®

This feature allows installers to easily auto-learn Personal Help Buttons, test telephone service functioning, and conduct PHB range tests.

Clearly labeled connections

Installations are easier thanks to clearly labeled connections and matching, color-coded cords.

Personal Help Button

Each CarePartner Communicator comes with a Personal Help Button.

Specifications

Color:	Talc
Size:	7 inches (17.5 cm) wide, 6 1/2 inches (16.5 cm) high, 6 1/2 inches (16.5 cm) deep
Weight:	3 lbs
Power Requirements:	120V 60HZ 50mA
Operating Temperature:	32°F (0°C) to 120°F (45°C)
Storage Temperature:	4°F (-20°C) to 140°F (60°C)
Agency Compliances:	FCC Parts 15 and 68, UL 1637, Industry Canada RSS-210, CS-03
Surge Protection:	Significantly exceeds IEEE Standard 587
Communications:	Automatic pulse or tone selector
